

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A printer comprising:
a receiving section which receives printing jobs;
a storage section which stores the received printing jobs;
a printing section which executes the printing jobs extracted from the storage section;
a determining section which determines, ~~during a printing job receiving process in the receiving section,~~ whether a page index of each page or a job index of the printing job which has been received by the receiving section includes information on special printing;

a display section which displays a list of the printing jobs that are determined as including information on the special printing in the page index or the job index by the determining section;

an input section which accepts a printing job selected by a user from the displayed list;
and

a control section which extracts from the storage section the printing job selected by the user, and causes the printing section to execute the selected printing job.

2. (Canceled).

3. (Original) A printer according to claim 1, wherein the special printing is printing on a special paper sheet other than a normal paper sheet.

4. (Original) A printer according to claim 3, wherein the special paper sheet is a tab paper sheet.

5. (Original) A printer according to claim 3, further comprising:
a paper feed section which feeds a special paper sheet to the printing section; and
a sensor which senses absence of a special paper sheet in the paper feed section,
wherein when a printing job including special printing is selected by the user through the input section, the control section causes the display section to display absence of the

special paper sheet, on condition that the sensor senses absence of the special paper sheet in the paper feed section.

6. (Currently Amended) A print system comprising:
- at least one terminal which receives data input for printing and sends a printing job for executing the printing based on the input data; and
 - a printer which is networked to the terminal and executes the printing job sent from the terminal to print data,
- said printer comprising:
- a receiving section which receives printing jobs sent from the terminal;
 - a storage section which stores the received printing jobs;
 - a printing section which executes the printing jobs extracted from the storage section;
 - a determining section which determines, ~~during a printing job receiving process in the receiving section,~~ whether a page index of each page or a job index of the printing job which has been received by the receiving section includes information on special printing;
 - a display section which displays a list of the printing jobs that are determined as including information on special printing in the page index or the job index by the determining section;
 - an input section which accepts a printing job selected by a user from the displayed list; and
 - a control section which extracts from the storage section the printing job selected by the user, and causes the printing section to execute the selected printing job.

7. (Canceled).

8. (Original) A print system according to claim 6, wherein the special printing is printing on a special paper sheet other than a normal paper sheet.

9. (Original) A print system according to claim 8, wherein the special paper sheet is a tab paper sheet.

10. (Original) A print system according to claim 8, wherein said printer further comprises:

a paper feed section which feeds a special paper sheet to the printing section; and

a sensor which senses absence of a special paper sheet in the paper feed section,

wherein when a printing job including special printing is selected by the user through the input section, the control section causes the display section to display absence of the special paper sheet, on condition that the sensor senses absence of the special paper sheet in the paper feed section.

11. (Currently Amended) A printing method comprising:

receiving printing jobs;

determining, ~~during the process of receiving the printing jobs,~~ whether a page index of each page or a job index of the received printing job ~~which has been received~~ includes information on special printing;

executing the printing jobs that are determined as not including information on special printing in the page index or the job index;

displaying a list of the printing jobs that are determined as including information on special printing in the page index or the job index without executing the printing jobs;

accepting a printing job selected by a user from the displayed list; and

executing the printing job selected by the user.

12. (Original) A printing method according to claim 11, wherein the special printing is printing on a special paper sheet other than a normal paper sheet.

13. (Original) A printing method according to claim 12, wherein the special paper sheet is a tab paper sheet.

14. (Previously Presented) A printer according to claim 1, wherein the control section prevents the printing section from printing any of the received printing jobs that include information on the special printing that are stored in the storage section, until the input section receives a selection made by the user for printing one or more of the received printing jobs that include information on the special printing.

15. (Previously Presented) A printer according to claim 14, wherein the one or more of the received printing jobs that include information on the special printing also include information on normal printing of at least one or more sheets of paper.

16. (New) A printer according to claim 1, wherein execution of a printing job including the special printing is prevented unless a job selection made by a user is received.
